

SODAT software

Case Study

Reference problem:

"The employees bring to the company via USB "Flash Disk" personal content including, viruses, music, movies, games and various other software which is saved to their computers. Part of this software was subject to copyright or licensing laws and other regulations. After some time, an infected system stopped working and fully engaged our IT department for several weeks."

Client: logistics and transportation company, about 500 employees

SODAT software solutions:

After the discussion with our client we decided to disable connecting unknown removable devices as well as all starting files (.EXE), which were a real security threat. In addition, we are defending installation of any software from users other than IT specialists. The entire solution was supplemented by monitoring of a file operations on removable devices for easier control as well as faster threat detection.

Used SODAT software technology: OptimAccess
