

# SODAT software

---

## Case study

### **Reference problem:**

*"The laptop computer was stolen at the airport to one of our engineering and solution developers. Six months later at the Moscow expo show we had discovered our unique solution presented at the stand of the Chinese competitor.*

*We have lost part of newly developed technology as well as all invested resources. It took us several months and a lot of extra resources, but fortunately we have developed new generation of the product."*

**Client:** *engineering company, more than 300 employees*

### **SODAT software solutions:**

The file encryption of company's notebooks ("Data Safe"), reliably solves any future incidents of such a type. The encryption is based on sophisticated AreaGuard technology. In the case of emergency, the confidential information together with know-how is not available to non-authorized parties. As a result of this data security software the company can pass its computers to any external maintenance and service organization without any additional data protection or other associated safety checks.

**Used SODAT software technology:** Neo AreaGuard
